How to remove eyelash extensions safely How to refill eyelash extensions.

Client consultations. Aftercare Instructions (template provided)

How to take good photos angles.

Why classic eyelash extensions?

Its the **art** of applying one eyelash extension per one natural eyelash. From natural lash isolation, to troubleshooting retention, to understanding styling.

The classic course lays the foundation in skills and knowledge to build a thriving lash career. All aspects of theory, application, and styling are covered giving you the confidence to pursue lash excellence.

Why volume?

Volume is an advanced lashing technique where two to six lightweight lash extensions are applied per natural eyelash. A thorough understanding of classic lashing is required to execute proper volume lashing.

Why Mega Volume?

Mega volume is an advanced technique that results in the fullest, thickest lash sets by applying mega volume fans consisting of 7–14d in varying thicknesses ranging from 0.03–0.07mm. Compared to volume lashing, where you apply 2–6d volume lash fans, mega volume requires advanced skill and application techniques to create these bold, dense sets.
